

SolarWinds Access Rights Manager

Manage and audit user access rights across your IT infrastructure

SolarWinds® Access Rights Manager (ARM) is designed to assist IT and security administrators in quickly and easily provisioning, deprovisioning, managing, and auditing user access rights to systems, data, and files, so they can help protect their organizations from the potential risks of data loss and breaches. By analyzing user authorizations and access permissions, you get visualization of who has access to what, and when they accessed it. With just a few clicks, customized reports can be generated to help demonstrate compliance with many regulatory requirements. Provision and deprovision users via role-specific templates to help assure conformity of access privilege delegation, in alignment with security policies.

ARM BENEFITS AT A GLANCE

- Easily analyze user access rights across your IT infrastructure.
- Rapidly identify and reduce the risk of unauthorized system access and data breaches.
- Quickly demonstrate compliance with reports created on demand or scheduled for automated delivery.
- Identify and manage risks through the detection of malicious or accidental access attempts and compromised accounts.
- Easily create user accounts and review user permissions, groups, and access across all systems, data, and files.
- Support timely and complete deprovisioning of user access.
- Reduce IT workload and save time by delegating permission management to data owners.

FEATURES

ARM
AUDIT EDITION

ARM
(FULL VERSION)

User permissions analysis for Microsoft® Active Directory®, Azure® AD, file servers (Windows®, EMC, NetApp®), SharePoint®, SharePoint Online, Exchange™, Exchange Online, Teams, OneDrive®, SAP/R3

Auditing (reporting) for Active Directory, file servers (Windows, EMC, NetApp), SharePoint, SharePoint Online, Exchange, Exchange Online, Teams, OneDrive, SAP/R3

Monitoring (logging) for Active Directory, Azure AD, file servers (Windows, EMC, NetApp), SharePoint Online, Exchange/Exchange Online, OneDrive

Risk analysis overview

Risk management

User provisioning for Active Directory and Azure AD

Permission management for Active Directory, file servers (Windows, EMC, NetApp), SharePoint, SharePoint Online, Exchange, Exchange Online, Teams, OneDrive

Data owner concept (delegation of access rights management)

Self-service permissions portal

Remediation of user permissions and AD group memberships

ACCESS RIGHTS MANAGER – AUDIT EDITION

Analyzing, Monitoring, and Auditing of:

Active Directory

Enhance security by monitoring, analyzing, and auditing Active Directory and Group Policy to see what changes have been made, by whom, and when.

File Share

Monitor and audit your file servers to help prevent data leaks and unauthorized changes to sensitive files and data, through visualization of permissions on file servers.

Exchange

Simplify Exchange monitoring and auditing to help prevent data breaches. Track changes to mailboxes, mailbox folders, calendars, and public folders. Help improve compliance and detect unauthorized Exchange changes.

SharePoint

Display SharePoint permissions in a tree structure and quickly see who's authorized to access a given SharePoint resource. Using the scan comparison report, you can find out who has made changes to permissions and what they were.

User Permissions Analysis

Help protect against internal security threats by analyzing user access to services and file servers, with visibility into group memberships from Active Directory and file servers.

Custom Report Generation

Create and generate management- and auditor-ready reports to help demonstrate regulatory compliance by showing user access rights in just a few clicks. Log activities in Active Directory and file servers by user.

ACCESS RIGHTS MANAGER – FULL EDITION

(All Features from the Audit Edition, Plus the Following)

User Provisioning and Management for Active Directory

Set up and manage new user accounts typically in seconds with standardized role-specific templates to provide access to file servers and Exchange.

Data Owner Concept for Access Rights Delegation

Define data categories across your organization, assign its functional owners, and delegate parts of permissions management to data owners.

Self-Service Permissions Portal

Put data access rights directly in the hands of data owners instead of administrators with a web-based, self-service permissions portal.
